2/28/14

Talked to a DOT supervisor yesterday about the mag. chloride being used on the roads. He told us it's rusting through their thick truck frames in 5 years which means they have to buy new trucks! It's also rusting out break lines, fuel lines, shocks, and everything else!

I've talked to truckers who have also told me how bad it's rusting out their trucks! (Cars will rust out much faster than trucks with their thinner frames.)

My son (who has always undercoated all his vehicles with very expensive undercoating that's made to protect against damage from salt) spent an entire week undercoating every inch of his newest truck with POR-15 (\$162.00 a gallon).

The stuff that is being applied to the roads is eating right through it in less than 1 1/2 winters (with very little mileage being put on the truck.) The bottom of the doors are rusting. The shocks were so bad, they had to be replaced. Everything under the truck is starting to rust. It's eating right through the undercoating. He's never had any problems in the past when using this product before the mag. chloride started being used (or any other products that are now being used). This stuff should be outlawed!!!! It's not fair to the people who can not afford to buy new vehicles every few years or make costly repairs!!

It seems to me that the only ones who benefit are car/truck dealers, garages doing vehicle repairs, and the state who is collecting sales taxes on new vehicles purchased to replace the rusted out ones!

Please stop the use of these new chemicals! The cost of the damage is NOT WORTH IT!!!!!!!!!!!!

Thank you;
